

# TRAFFIC MANAGEMENT INTERFACE (TMI)

... planning traffic operations the most efficient way

THOREB provides a number of Traffic Operation Control tools to facilitate the daily traffic management. The traffic can be supervised in real-time, regarding vehicle position, punctuality, etc. on a map and chart. Moreover it is possible to communicate with the driver via text and voice messages and to handle assault alarm events. Additionally, the Thoreb Alert application shows CAN diagnostic messages in real-time from the vehicles.

The enabled functionalities differ between the users, depending on the type of system. The Traffic Management Interface (TMI) works similar to an internet browser and obtains his information online over the Thoreb server. With the TMI software information can be studied, groups of lines defined, vehicles of interest locked and much more.

## Advantages

- ✓ Graphical line overview
- ✓ Vehicles and stops visible on a map, with the selected journey outlined
- ✓ Punctuality information
- ✓ Detailed information about selected vehicles, journeys, stops, etc.
- ✓ Tracking of any vehicle
- ✓ Definition of line groups
- ✓ History of journeys
- ✓ Indication and logging of vehicle alarm events
- ✓ Text and voice messages to and from the vehicles
- ✓ Point-to-point and point-to-multipoint communication via iTradio
- ✓ Most efficient way to control the traffic management with a single program
